G-OVEN 5500

Drying Oven for Glass

Low cost and high speed

Designed for drying paint applied to glass products. Its peculiar characteristics are in the transport system

- developed to move the glasses appropriately inside the oven without damaging them. The drying system
- consists of a series of infrared lamps which, through a special ventilation system, adjust hot air mixed with rays evenly on the coated surface. Afterwards, a cooling hood reduces the surface temperature of the pieces before being off-loaded. The optimization of airflows and the special study of infrared radiation allow for extremely fast times and low running costs.

- ✓ Ideal for drying of glass sheets coated with water based products
- ✓ Quick drying
- ✓ Combined system of IR lamps and Hot Air Wind-Jet for drying
- ✓ Final cooling hood
- ✓ Transport with special rollers
- ✓ High drying efficiency
