PEGASO

De-Nibbing and sanding machine

Proven technology

- Realized for sanding and de-nibbing of panels and doors. Designed to process pieces with flat base and upper shaped profile. It removes the wood fibres that show up after the milling process of the raw or after the application of one primer coat. Transport device solidly anchored to the sturdy steel structure. The sanding of the pieces is carried out by the group of 8 parallel rotating brushes. Possibility of setting the carousel height. Long lasting and operational stability. All machine working parameters are easy to set and can be monitored from the control panel.

- ✓ Punctured and vacuum belt, for best piece grip
- ✓ Orbiting carousel group with 8 counter-rotating brushes, for high quality
- ✓ Sanding speed adjustable by inverter
- ✓ Motorized adjustment of the piece thickness
- ✓ Simple and intuitive control touch screen
